

Business Transformation Work Design & Technology

organization in the age of A.I.

Kevin Crowston

*Distinguished Professor of Information Science & Associate Dean for Research
Syracuse University School of Information Studies*

How organizations are managing the potentialities (and risks) enabled by new technologies? How AI (artificial intelligence) is shaping the work and the organization life? What is happening: AI stealing human jobs? Humans evolving while learning to use new tools?

In this cycle of seminars Prof. Kevin Crowston will discuss the changes that technology is introducing into organization's life and will experiment with the students the use of emerging technologies in managerial tasks. **Students will work in a team project applying A.I. tools to business cases.**
